Data Science student specializing in AI Data Engineering. Hands-on experience building automated ETL pipelines with Apache Airflow and PySpark, implementing vector databases for RAG workflows, and deploying containerized data services on AWS and GCP. Focused on building reliable data infrastructure that powers production machine learning models.

EDUCATION

STATE UNIVERSITY OF SURABAYA — Surabaya, East Java
Bachelor of Data Science — Aug 2022 – Jul 2026
GPA: 3.59/4.00 (145 Credits completed)
Relevant Coursework: Data Science, Data Structures and Algorithms, Statistics, Data Modeling, Machine Learning, Computer Vision, Generative AI.

WORK EXPERIENCE

State University of Surabaya — Surabaya, East Java
Research Assistant — Jan 2026 – Present

- Co-authored a research paper currently under peer review in a Scopus Q1 journal, focusing on generative model architectures and knowledge graphs.
- Ran hyperparameter tuning and ablation experiments to evaluate architectural improvements against baseline models for an IEEE-format manuscript.
- Set up Docker environments on AWS GPU instances to run data extraction, ontology mapping, and embedding generation workflows.
- Tracked datasets and model checkpoints using Git and DVC to keep experimental results organized and reproducible.

Kominfo Jatim — Surabaya, East Java
AI Engineer Intern — Jul 2025 – Dec 2025

- Built a RAG-based question-answering bot for the Majadigi portal using AWS Bedrock and Qdrant, helping citizens search regional regulations easily.
- Trained an NLP classification model for hoax news detection, helping the internal team review citizen incident reports more quickly.
- Set up GitLab CI/CD pipelines to run automated tests and deploy code to a Linux VPS, and documented REST APIs in Postman for the frontend team.
- Assisted in deploying the AI features to production on Majadigi, serving live citizen inquiries.

PT PLN Icon Plus — Surabaya, East Java
Data Engineer Intern — Feb 2025 – Jun 2025

- Built automated ETL pipelines using Apache Airflow, PySpark, and Python to process 240,000+ daily ICONNET telecom records, reducing manual reporting time by 50%.
- Created a Slack alert notification linked to Airflow DAGs, enabling the team to detect and resolve pipeline errors quickly.
- Analyzed telecom signal quality data across providers and built interactive Looker Studio dashboards for weekly operational monitoring.
- Built a database question-answering tool using an LLM and SQL queries, helping 15+ staff look up network records without writing manual SQL.

Bangkit Academy led by Google, GoTo, and Traveloka — Remote
Machine Learning Cohort — Aug 2024 – Dec 2024

- Led a 7-member capstone team (ML, Cloud, Mobile) to develop NV-Bite, a nutrition tracking mobile app, completing full project delivery 1 week ahead of deadline.
- Collected, cleaned, and labeled a dataset of 6,500+ food images for multi-class classification model training.
- Trained a Computer Vision classification model and deployed it using Flask on Google Cloud Platform (GCP) to serve predictions for the mobile app.
- Awarded Best Presenting Group out of 30+ capstone teams for technical delivery and clear project demonstration.

TECHNICAL PROJECTS

Personal Agentic: Multi-Agent Workspace Platform Sep 2026 – Oct 2026

- Built a personal agentic to coordinate coding agents like a group chat across local and remote codebases, with task delegation, scheduled runs, and persistent execution history.
- Handled asynchronous event processing for delivery tracking, read receipts, and remote operations across distributed workstations.
- Implemented a production-minded orchestrator agent for 24/7 workflow.

Hybrid Graph-RAG Academic Knowledge Base (Thesis) Aug 2025 – Jul 2026

- Built a Hybrid Graph-RAG system combining Neo4j and Milvus to search and connect 10,000+ academic papers and author profiles using both semantic similarity and graph links.
- Wrote Apache Airflow DAGs to extract, clean, and load publication data from online academic sources into Neo4j and PostgreSQL.
- Co-authored a research methodology paper under peer review in a Scopus Q1 journal, formalizing graph retrieval benchmarks with sub-second API query latency.

End-to-End Sentiment Analysis Pipeline for KIP-K Scholarship Tweets Jun 2024

- Built a Python script and text preprocessing pipeline to collect and clean 4,000+ raw tweets from X, training a BiLSTM model with GloVe embeddings.
- Visualized sentiment patterns across 50+ universities in a Looker Studio dashboard to analyze public policy feedback.

ORGANIZATIONAL EXPERIENCE

Himpunan Mahasiswa Sains Data (UNESA) Surabaya, East Java
Staff of Advocacy and Student Welfare Division Jan 2024 – Jan 2025

- Planned and executed 10+ student events, including data science webinars, workshops, and competitions over a one-year tenure.
- Initiated the InSCAW career workshop series, coordinating with industry speakers and engaging 50+ student participants.
- Served as a liaison between students and faculty department heads to address academic concerns and welfare requests.

SKILLS

Technical Skills:

- **Programming:** Python, SQL, Bash
- **Data Engineering:** Apache Airflow, PySpark, ETL Pipeline Design, Data Modeling, Kafka
- **Databases & Storage:** PostgreSQL, BigQuery, Neo4j, Milvus, Redis, MinIO
- **AI & Machine Learning:** LLMs, RAG / GraphRAG, Computer Vision, NLP, PyTorch, TensorFlow, MLflow
- **Cloud & DevOps:** AWS, Google Cloud Platform (GCP), Docker, Linux, Git, CI/CD (GitLab CI, GitHub Actions)
- **Soft Skills:** Problem Solving, Cross-Functional Collaboration, Technical Communication

Certifications & Training:

- DeepLearning.AI TensorFlow Developer & Generative AI Specializations
- Google Cloud Skills Boost: Machine Learning Specialization (JuaraGCP)
- AWS Certified CloudOps / Cloud Computing Training
- Dicoding: Data Analysis with Python
- EnglishScore / IELTS Equivalent (Band 7.0 – C1 Equivalent)

Languages:

- Indonesian (Native), English (Fluent, IELTS: 7.0), Javanese (Conversational)
